

COMPACTING FACTOR APPARATUS

Code : B185

- Used to determine the compacting factor of concrete of low, medium, and high workability.
- The apparatus consists of two conical hoppers attached above a cylinder, that are aligned on a robust steel frame.
- Each hopper is equipped with a hinge for a Quick Release mechanism.
- The compacting factor is the ratio between the weight of the concrete, which is partially compacted in the cone, to the weight of the fully compacted concrete in the cylinder.
- Both the hoppers and cylinder are of rigid construction and made of metal not readily attacked by cement paste.
